

GCERM

Global Center for Efficiency in use of Resources and Materials

The Mission of **GCERM** Foundation is to develop intelligence in the efficient combination of best fitting materials, their production processes and necessary energy sources in order to reduce and at later stage invert CO₂ emissions.

- Research in and development of “Clean Materials”, related “Clean Processes” as well as best fitting “Clean Energy” sources
- Management of related property rights
- Technology transfer
- Creation of awareness for the fact that *material efficiency* and *energy efficiency* are directly linked and value-equivalent, which needs to be fostered by adequate mechanisms
